10. ADVANTAGES/DISADVANTAGES

11. APPLICATIONS

12. CONCLUSION

13. FUTURE SCOPE

14. GITHUB and DEMO LINK

1.INTRODUCTION

1.1 Project Overview:

The internet of Things is a developing topic of technical, social, and economic significance. The usage of the gas brings great problems in the domestic as well as working places. The inflammable gas, which is excessively used in the work places (Industries). The leakage of the gas causes destructible impact to the lives and as well as to the heritage of the people. Most of the societies have fire safety mechanism. But it can use after the fire exists. As a result, a system for detecting and monitoring gas leaks is required. Through a flame sensor, the system will sense fire and flame. The buzzer begins to ring when a fire is detected. Tests have shown that the system can keep track of the wastage of gas and leaks and notify the user. The performance that was produced showed that it was successful in reducing the amount of gas that was wasted.

1.2 Purpose:

The design of a sensor-based automatic gas leakage detector with an alert and control system has been proposed. This is an affordable, less power using, lightweight, portable, safe, user friendly, efficient, multi featured and simple system device for detecting gas. To monitor this gas leak, the system includes an MQ6 gas detector. This sensor detects the amount of leaking gas present in the surrounding atmosphere. In this way, the consequences of an explosion or gas leak can be avoided.

2.LITERATURE SURVEY :

2.1 Existing Problem:

Gas leakage is nothing but the leak of any gaseous molecule from a pipeline, or cylinder etc in the industries. Gas Leakages in open or closed areas can prove to be dangerous .This can occur either purposefully or even unintendedly. As we are aware that these kinds of leaks are dangerous to our health, and when it becomes explosive it could cause great danger to the people, industry and the environment. Therefore, we have used IoT technology to make a Gas Leakage Detector for society which has Smart Alerting techniques involving sending a text message to the concerned authority and the ability to perform data analytics on sensor readings. Our main aim is to propose a gas leakage system for a society where each flat has gas leakage detector hardware. This will detect the harmful gases in the environment and alerting to society members through the alarm and sending notifications.

2.3 Problem Statement Definition:

In most industries, one of the key parts of any safety plan for reducing risks to personnel and plant is the use of early-warning devices such as gas detectors. These can help to provide more time in which to take remedial or protective action. They can also be used as part of a total, integrated monitoring and safety system for an industrial plant. Rapid expansion of oil and gas industry leads to gas leakage incidents which are very serious and dangerous. Solutions need to be found out at least to minimize the effects of these incidents since gas leaks also produce a significant financial loss. The challenges are not only to design a prototype of the device that can only detect but also automatically respond to it whenever the leakage occurs.

3. IDEATION & PROPOSED SOLUTION:

3.1 Empathy Map Canvas:

3.2 Ideation & Brainstorming:

Brainstorm & idea prioritization

Use this template in your own brainstorming sessions so your team can unleash their imagination and start shaping concepts even if you're not sitting in the same room.

- 10 minutes to prepare
- 1 hour to collaborate
- 3-5 people recommended

[Show template feedback](#)

Before you collaborate

A little bit of preparation goes a long way with this session. Here's what you need to do to get going.

- 10 minutes

- Team gathering: Define who should participate in the session and send an invite. Share relevant information or go with ideas.
- Set the goal: Think about the problem you'll be focusing on solving in the brainstorming session.
- Warm-up: Have everyone use the facilitation tool. Set the facilitation. Participants to run a happy and productive session.

[Open article](#)

Define your problem statement

What problem are you trying to solve? Frame your problem as a How Might We statement. This will be the focus of your brainstorm.

- 5 minutes

How Might We

How might we detect and prevent fire hazards that cause property damage, injuries, and loss of life?

Key rules of brainstorming

- Stay in topic
- Encourage wild ideas
- Defer judgment
- Listen to others
- Go for volume
- If possible, be visual

Brainstorming

Brainstorming is a group activity that encourages creative thinking and idea generation. It's a time when team members share their ideas and build on each other's ideas.

Brainstorming

Brainstorming is a group activity that encourages creative thinking and idea generation. It's a time when team members share their ideas and build on each other's ideas.

Brainstorm

Write down any ideas that come to mind that address your problem statement.

- 10 minutes

TP

Use the template to write down any ideas that come to mind that address your problem statement.

Brainstorming

Brainstorming is a group activity that encourages creative thinking and idea generation. It's a time when team members share their ideas and build on each other's ideas.

Brainstorming

Brainstorming is a group activity that encourages creative thinking and idea generation. It's a time when team members share their ideas and build on each other's ideas.

Need some inspiration?

See how we've used this template to solve real-world problems. [Open article](#)

Need some inspiration?

See how we've used this template to solve real-world problems. [Open article](#)

Group ideas

Take turns sharing your ideas with clustering similar or related notes as you go. In the last 10 minutes, give each cluster a representative label. If a cluster is bigger than an sticky note, try and see if you can break it up into smaller sub-groups.

- 10 minutes

TP

Use the template to write down any ideas that come to mind that address your problem statement.

Brainstorming

Brainstorming is a group activity that encourages creative thinking and idea generation. It's a time when team members share their ideas and build on each other's ideas.

Priority

Your team should all be on the same page about which ideas are important enough to pursue. Group your ideas on the grid to determine which ideas are important and which are feasible.

- 10 minutes

Importance

Importance is a measure of how important an idea is to the problem you're trying to solve. It's a measure of how important an idea is to the problem you're trying to solve.

Feasibility

Feasibility is a measure of how feasible an idea is to implement. It's a measure of how feasible an idea is to implement.

Brainstorming

Brainstorming is a group activity that encourages creative thinking and idea generation. It's a time when team members share their ideas and build on each other's ideas.

After you collaborate

You can export the mind as an image or pdf to share with members of your company who might find it helpful.

Quick add-ons

- Share the mind: Share a mind map with stakeholders to keep them informed and the substance of the session.
- Export the mind: Export a mind map as a PDF or PNG to share with stakeholders or print it out.

Keep moving forward

- Strategy blueprint: Define the components of a new idea or strategy.
- Customer experience journey map: Understand customer needs, behaviors, and expectations to create a better experience.
- Strengths, weaknesses, opportunities & threats: Identify strengths, weaknesses, opportunities, and threats (SWOT) to develop a plan.

3.3 Proposed Solution:

S.No.	Parameter	Description
1.	Problem Statement (Problem to be solved)	To detect the gas leakage to alert the user through notification
2.	Idea / Solution description	In order to have a control over such conditions we proposed system that uses sensors which is capable of detecting the gases such as LPG, CO ₂ , CO and CH ₄ . This system will not only able to detect the leakage of gas but also alerting through audible alarms.
3.	Novelty / Uniqueness	<ul style="list-style-type: none"> Ability to predict the hazardous situation Low cost
4.	Social Impact / Customer Satisfaction	<ul style="list-style-type: none"> This model is vital for the society as there are lot of people unable to detect the gas leakage prior the fire accident. we have used the IoT technology to make a Gas Leakage Detector for society which having Smart Alerting techniques involving sending text message to the concerned authority and an ability performing data analytics on sensor readings.
5.	Business Model (Revenue Model)	

6.	Scalability of the Solution	Develop a proposed system which include some safety factors.
----	-----------------------------	--

3.4 Problem Solution fit:

Define CS, fit into CC	1. CUSTOMER SEGMENT(S) CS <p>The industrialists are the users or customers, who are engaged with the production of gases for their manufacturing. Here industrial worker is the user or customer, who are engaged with gas related production.</p>	6. CUSTOMER CC <p>High cost of installing the products make them to move far from recent technologies. It is difficult to know failures. Ability to detect the wide range of gases</p>	5. AVAILABLE SOLUTIONS AS <p>The monitoring and detecting the leakage of gas could be done by the manpower. Automatic cut off gas supply. In early days they used to identify the leakage of gas by sensing the smell of particular gas. Even though man power could reduce electricity cost and monitor properly, it may cause high risk for their life.</p>	Explore AS, differentiate
	2. JOBS-TO-BE-DONE / PROBLEMS J&P <ul style="list-style-type: none"> Gas leakage leads to many diseases and also increases the fatality rate. Heavy budget problems on buying and installing a gas detecting system Having no proper maintenance or monitoring the system Flammable gas leakage may lead to Secondary accident such as fire and explosion, while toxic gas. 	9. PROBLEM ROOT CAUSE RC <ul style="list-style-type: none"> Improperly installed tube fittings /poor tubing selection. Improper use of gas furnace, stove, or appliance, including leaking due to gas lines being hooked up incorrectly. Use of defective equipment. Behind this gas leakage problem there could be many reasons like atomic reactions between molecules and material quality. 	7. BEHAVIOUR BE <ul style="list-style-type: none"> If the gas leaked is heavily toxic, there is a chance of causing hereditary health hazards. Monitoring the system regularly. To determine the gas leakage area and alerts through by warning message or alerting sound. Using manpower as the source of monitoring the leakage causes high hazards. 	
	3. TRIGGERS TO ACT TR <p>Identification of gas leakage will be done immediately and urges them to find out a solution as soon as possible. Health issues due to the toxic gases urges them to find out a solution</p>	10. YOUR SOLUTION SL <ul style="list-style-type: none"> Develop a cost efficient IoT based gas leakage detecting system which can be easily accessed by the workers. If there is gas leak then it will alert the workers by sending SMS. 	8. CHANNELS OF BEHAVIOUR CH <p>ONLINE: Promoting through social media, With the help of social media influencer. Users can also easy to monitor the live reports.</p> <p>OFFLINE: Identifying the leakage area and take precautionary actions manually. It makes call to user. Frequently check the leakage of gas</p>	
Identify strong TR & EM	4.EMOTIONS: BEFORE / AFTER EM <p>Before: The leakage of gases causes heavy losses and made them feel depressed & guilt and also lose the recognition of their products. After: Creating awareness and safety precautions to the workers to work without any fear.</p>			Extract online & offline CH of BE

4. REQUIREMENT ANALYSIS:

4.1 Functional requirement:

Business Requirements	User Requirements	Product Requirements
The gas leakage detection system can be deployed in homes, hotels, factory units, LPG cylinder storage areas, and so on. The main advantage of this IoT and Arduino-based application is that it can determine the leakage and send the data over to a site. It can be monitored, and preventive measures can be taken to avoid any disaster.	The gas leakage detection system can be optimized for detecting toxic gasses along with upgrading them with smoke and fire detectors to identify the presence of smoke and fire. Ensuring worker safety is important but making using of the right technology is even more vital.	Detecting gasses is necessary regardless of your business role or individual purpose. Certain technologies at play make such IoT devices what they are, and if you want to indulge in IoT application development, you must know what they are and what purpose they can fulfill.

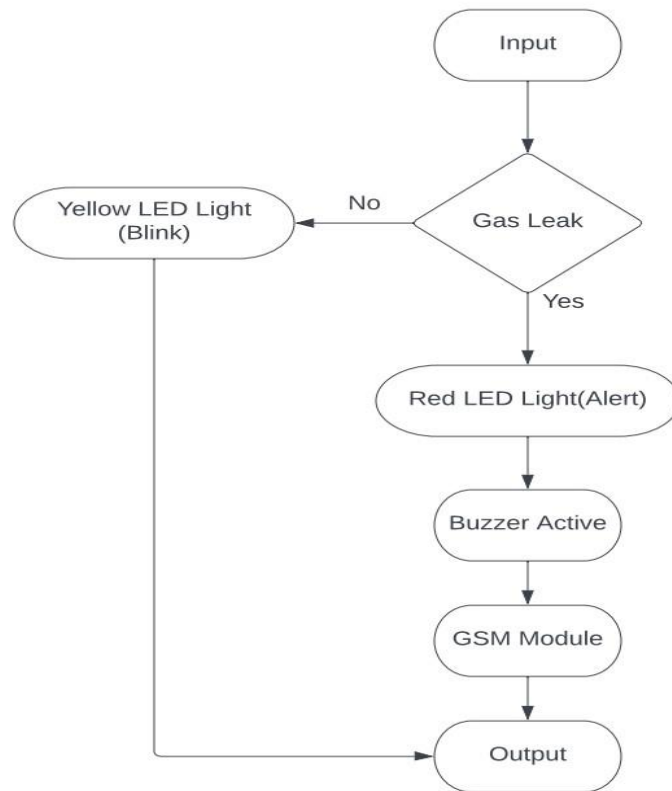

4.2 Non-Functional requirements:

FR No.	Non-Functional Requirement	Description
NFR-1	Usability	The sensors used to detect the gas leakage which helps to prevent the high risk of gas explosion and also can prevent the causalities within and outside the covering area of the industries.
NFR-2	Security	The device is intended for the use of industries or factories, where there is a use of explosive gas is a source of risk. This device will help and secures from the causes.
NFR-3	Reliability	Gas leakage detecting system detects the gas leakage at industries or factories which detects the small amount of gas leakage as soon and sends the alerting SMS to users.
NFR-4	Performance	The Gas leakage detecting system is a device with an alarm setting. Whenever there is a gas leak ,which is greater than the threshold level, the inbuild sensor detects and alerts the user within a minute much before it can cause any accidents.

NFR-5	Availability	<p>The gas leakage detecting system is readily available in the market which is extremely expensive, but here we are providing a low-cost circuit for gas leakage detecting system and also it is user friendly</p>
NFR-6	Scalability	<p>The system is very simple and easy to maintain with cost efficient. A backup power supply will be included in the design to prevent from the power failure conditions. It has the capability to works for a period of time without any damage in the system components.</p>

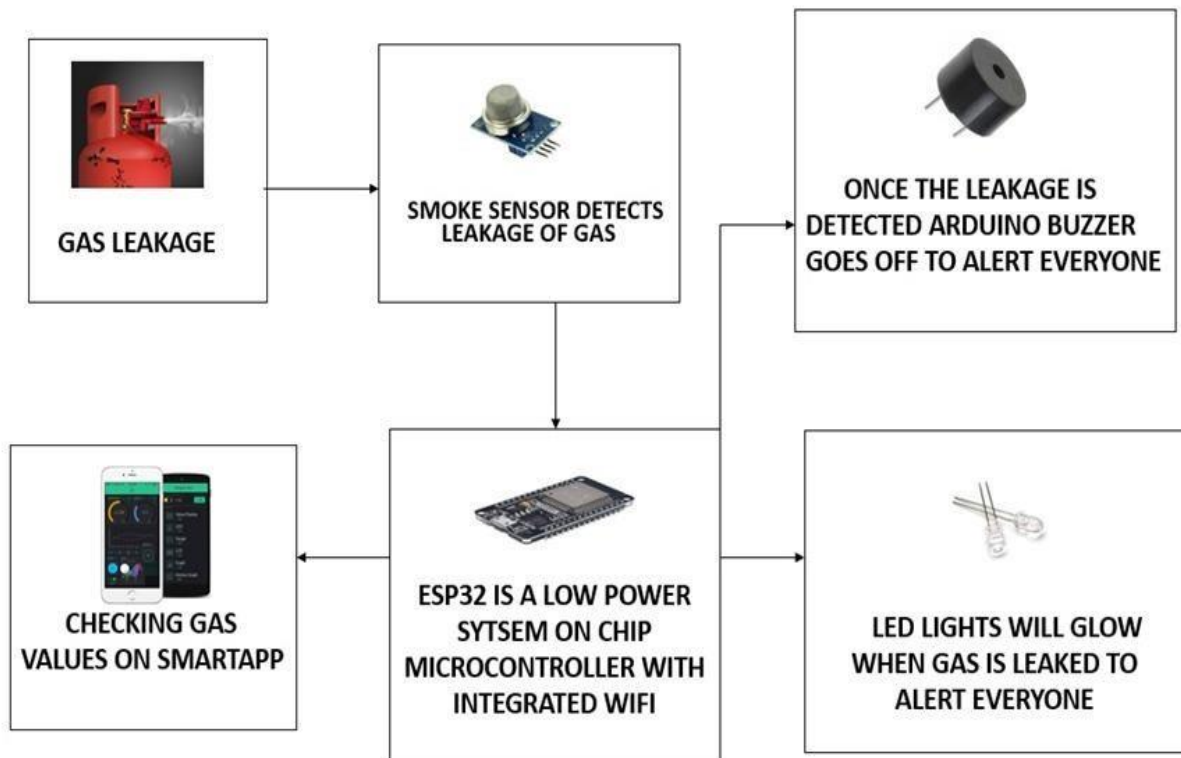

5. PROJECT DESIGN:

5.1 Data Flow Diagrams:

GAS LEAKAGE MONITORING AND ALERTING SYSTEM

5.2 Solution & Technical Architecture:

5.3 User Stories:

Sprint	Functional Requirement (Epic)	User Story Number	User Story / Task	Story Points	Priority	Team Members
Sprint-1	Monitor the gas leakage	USN-1	The Industrialist have own industries so the industry owner must take of workers . The workers have family so the industries give security assurance of workers.	2	High	Shanmugam S Vigneashwaran B Vishnu V Thirumurugan M
Sprint-2	Avoid From Disaster	USN-2	The gas leakage occur at the time fire service will take care to protect the people from the disaster.	1	High	Shanmugam S Vigneashwaran B Vishnu V Thirumurugan M
Sprint-3	Detect the gas	USN-3	We have <u>monitor</u> the gas by 24/7 hrs. To avoid leakage , the industry have quality pipes to transfer the gas and proper maintenance service once in a month. The industry must take care of what are the necessary process to avoid the gas leakage.	2	Low	Shanmugam S Vigneashwaran B Vishnu V Thirumurugan M
Sprint-4	The model is trained and tested by sample dataset.	USN-4	The programmer <u>design</u> the model to detect the gas leakage.	2	Medium	Shanmugam S Vigneashwaran B Vishnu V Thirumurugan M
Sprint	Functional Requirement (Epic)	User Story Number	User Story / Task	Story Points	Priority	Team Members
Sprint-5	Warning message	USN-5	In case any gas leakage occur, the device <u>give</u> the alarm and alert message to concerned user within a minute.	1	High	Shanmugam S Vigneashwaran B Vishnu V

6. PROJECT PLANNING & SCHEDULING:

6.1 Sprint Planning & Estimation:

- SPRINT PLAN
- ANALYZE THE PROBLEM
- PREPARE an ABSTRACT, PROBLEM STATEMENT
- LIST A REQUIRED OBJECT NEEDED
- CREATE A PROGRAM CODE AND RUN IT
- MAKE A PROTOTYPE TO IMPLEMENT
- TEST WITH THE CREATED CODE AND CHECK THE DESIGNED PROTOTYPE

6.2 Sprint Delivery Schedule:

Sprint	Functional Requirement (Epic)	User Story	User Story / Task	Story Point	Priority
Sprint-1	Create	US-1	Create the IBM Cloud services which are being used in this project.	5	High
Sprint-1	Configure	US-2	Configure the IBM Cloud services which are being used in completing this project.	1	Medium
Sprint-1	Create	US-3	IBM Watson IoT platform acts as the mediator to connect the web application to IoT devices, so create the IBM Watson IoT platform.	1	Medium

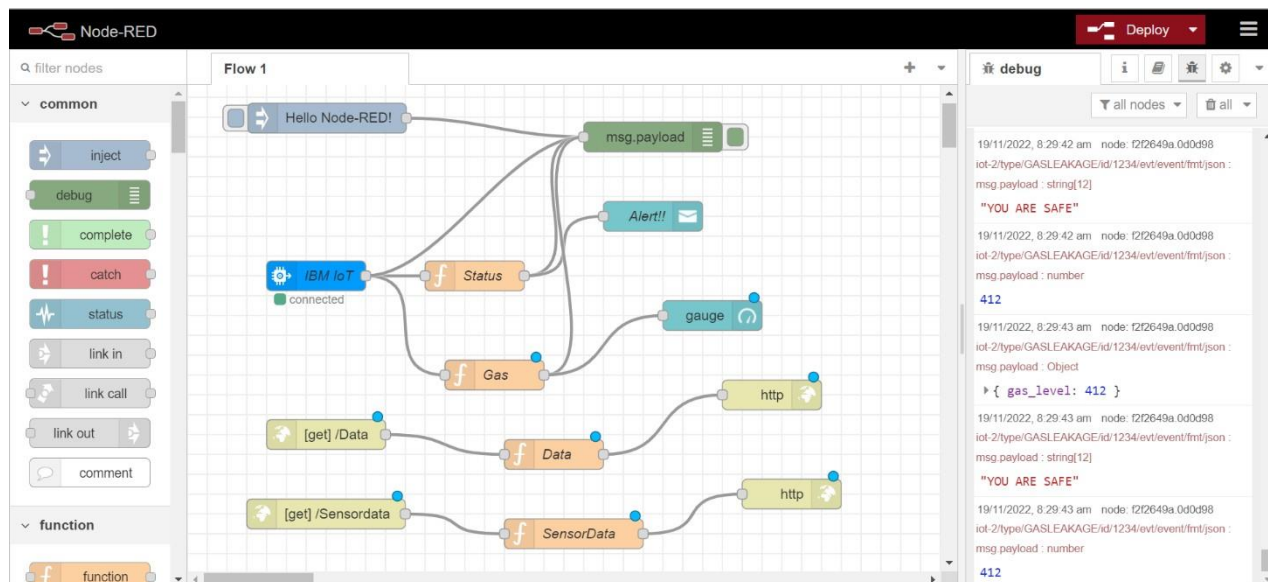

Sprint-1	Configure	US-4	Configure the IBM Watson IoT which are being used to display the output.	13	High
Sprint-2	Create	US-1	In order to connect the IoT device to the IBM cloud, create a device in the IBM Watson IoT platform and get the device credentials.	13	High

Sprint-2	Configure	US-2	Configure a device in the IBM Watson IoT platform and get the device credentials.	3	Medium
Sprint-2	Create	US-3	Create a Node-RED service.	3	High
Sprint-2	Configure	US-4	Configure the connection security and create API keys that are used in the Node- RED service for accessing the IBM IoT Platform.	1	Medium

Sprint-3	Develop	US-1	Develop a python script to publish random sensor data such as temperature, Flame level and Gas level to the IBM IoTplatform	1 3	High
Sprint-3	Configure	US-2	After developing python code and commands just run the code	1	Medium
Sprint-3	Print	US-3	Print the statements which represent the control of the devices.	1	Low
Sprint-3	Publish	US-4	Publish Data to The IBM Cloud	5	High
Sprint-4	Create	US-1	Create Web UI in Node- Red	5	High

Sprint-4	Configure	US-2	Configure the Node-RED flow to receive data from the IBMIoT platform	5	High
Sprint-4	Configure	US-3	Use cloudant DB nodes to store the received sensor data in the cloudant DB	5	High
Sprint-4	Publish	US-4	Publish the received data in webapplication	5	High

NODE RED WORKING

9. Result:

The system can be taken as a small attempt in connecting the existing primary gas detection methods to a mobile platform integrated with IoT platforms. The gases are sensed in an area of 1m radius of the rover and the sensor output data are continuously transferred to the local server. The accuracy of sensors is not up to the mark thus stray gases are also detected which creates an amount of error in the outputs of the sensors, especially in case of methane. Further the availability and storage of toxic gases like hydrogen sulphide also creates problems for testing the assembled hardware. As the system operates outside the pipeline, the complication of system maintenance and material selection of the system in case of corrosive gases is reduced. Thus, the system at this stage can only be use data primary indicator of leakage inside a plant.

10. Advantages/Disadvantages:

10.1 Advantages:

1. Get real-time alerts about the gaseous presence in the atmosphere.
2. Prevent fire hazards and explosions.
3. Supervise gas concentration levels.
4. Ensure worker's health.
5. Real-time updates about leakages.
6. Cost-effective installation.
7. Data analytics for improved decisions.
8. Measure oxygen level accuracy.
9. Get immediate gas leak alerts.

10.2 Disadvantages:

1. It requires air or oxygen to work.
2. It gets reacted due to heating of wire.
3. It can be poisoned by lead, chlorine and silicon

11.CONCLUSION:

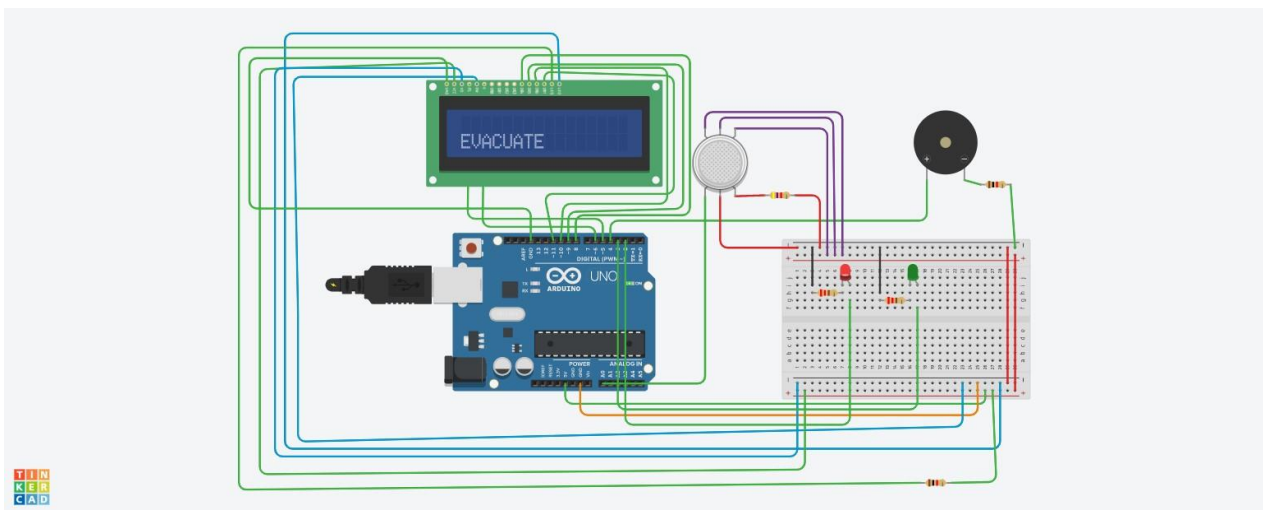

This gas leak detector system contains two features, this includes the SMS Gateway feature for only sending warning information regarding the gas leak to user, and the alarm for the warning alert. There is some improvement which can be applied for the future work, such as regarding the SMS Gateway, it need to enhance with feature such as notifying the user whenever the remaining credit balance is insufficient. Another thing which can be enhanced is regarding the sensor, the sensors in this module do not include somewhat notification for notifying the user whenever the sensor not working properly or not connected to the micro-controller for some cases, therefore, it is recommended to add this kind of features in the future work for better refinement.

12. FUTURE SCOPE:

We propose to build the system using an MQ6 gas detection sensor and interface it with an Aurdino Uno microcontroller along with an LCD Display. This system uses the gas sensor to detect any gas leakages. The gas sensor sends out a signal to the microcontroller as soon as it encounters a gas leakage. The microcontroller processes this signal and a message is displayed on the LCD to alert the user.

13. APPENDIX:

13.1 Circuit Diagram:

13.2 Components:

The design of a sensor-based automatic gas leakage detector with an alert and control system. The components are

S.NO	NAME OF THE COMPONENT	QUANTITY
1	Arduino Uno R3	1
